

## STERILOX TECHNOLOGIES APPOINTS NEW EXECUTIVE TO SPEARHEAD INTERNATIONAL EXPANSION PROGRAM

RADNOR, PA, January 30, 2004 -- Sterilox Technologies Inc., the world's leading manufacturer of non-toxic disinfectants, today announced the appointment of Paul J. Donnelly to the newly created position of Managing Director and President, International.

Donnelly has over 20 years experience in the medical devices sector, as well as a 14-year track record of building and managing successful international businesses. His role is to accelerate the expansion of the company's international business (outside North America) and broaden its portfolio from its current endoscopy focus, to medical and non-medical disinfection and decontamination applications.

Commenting on his appointment, David W. Anderson, President and CEO, Sterilox Technologies Inc., said, "The first chapter of our history is written. Now that Sterilox has won a substantial share of the U.K. endoscopy suite disinfectant market; established the efficacy and safety of our non-toxic disinfectant; and appointed distributors in 14 countries, our task is now to use this success to springboard the company into new sectors worldwide."

"Paul will be the catalyst to lead a successful U.K. operation into an international organization which will extend infection control technologies and expertise beyond traditional applications."

Based at the company's U.K. headquarters in Stoke-on-Trent, Donnelly will also work closely with the U.K. team to ensure that Sterilox consolidates and builds on its substantial share of the national endoscopy disinfectant market. Sterilox is currently one of the largest providers of sterilants to endoscopy suites in the U.K. National Health Service Trust hospitals.

Prior to joining Sterilox, Donnelly was the European Managing Director of SSL's Medical Division, was appointed to accelerate the commercialization of Verigen AG's proprietary cartilage technology, and held a number of senior international business development and operational roles with Johnson & Johnson, as well as CR Bard.

Sterilox Technologies, Inc., formed in 1997 and headquartered in Radnor, PA, is the world's leading developer and marketer of sterilization and disinfection generators. Using patented

electrolytic technology, Sterilox generators produce a safe and environmentally friendly biocidal solution on demand, eliminating concerns about shelf stability or chemical storage. The Sterilox solution has received multiple use-specific clearances as a high-level disinfectant/sanitizer from the U.S. FDA and EPA.
